

B

	Bcl-2 binding	LC8/DLC1 binding	Killing activity
BimEL	+	+	+
BimEL ΔBH3	-	+	-
BimEL TQT 110-112 AAA	+	-	++

Figure legend LC8/DLC1 binding negatively regulates the killing activity of BimEL. (A) The killing activity of BimEL is attenuated by the loss of binding to LC8/DLC1 (dynein light chain 1). Parental FDC-P1 cells, or subclones expressing Bcl-2 alone, or Bcl-2 and wild-type BimEL, a BH3 deleted mutant (BimEL ΔBH3) or a form that cannot bind LC8/DLC1 (BimEL TQT 110-112AAA) were deprived of their essential growth factor IL-3 for 3 days and their viability measured daily. The data shown is the mean \pm 1 SD from 3 independent experiments and is representative of at least 3 independent cell lines generated. (B) Summary of the binding properties and killing activity of BimEL.
